

POST-OP SKIN CARE

1. Please try to keep your incision clean and dry. You may shower if you can prevent water from running on the incision. Otherwise, use a bath and wash your hair in the sink.
2. You may use a damp cloth to clean around the area, two times per day.
3. If you see any redness or purulent drainage in the area, please call the doctor.
4. Please return to the office at your appointed time for removal of stitches.

Best Regards,

Camille A. Graham, M.D.

Neil M. Vora, M.D.

Wha-Joon Lee, M.D.

Michael J. Wiebel, M.D.
